The MAILING DATE of this communication appears on Period for Reply	the cover sheet with the C	correspondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status Company of the

## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Huang et al (US 5,748,277).

As to independent claim 1, Huang et al disclose a method for driving a liquid crystal display by applying AC pulses to a liquid layer through a plurality of scan electrodes and a plurality of data electrodes which face and cross each other (matrix), in which the scan electrodes are selected for scanning successively at specified time intervals (Figs. 1, 2A and 2B, col.2, lines 55-62), said method comprising; a reset step of applying a reset pulse (the preparation step/phase shown by Huang), which is to reset liquid crystal of the liquid crystal layer to a predetermined state, to an area of the liquid crystal layer that corresponds to a selected one of the scan electrodes (col. 3, lines 42-46, col. 5, lines 58-63, col. 8, lines 8-25, 38-44); a selection step of applying a selection pulse, which is to select a final state of the liquid crystal, to the area of the liquid crystal after the reset step (col. 3, lines 47-54, col.9, lines 40-42); wherein a pulse applied to the selected one of the scan electrodes during the reset step has an amplitude which is larger than a maximum amplitude of pulses applied to each of the data electrodes and has a polarity maintaining period which is longer than that of the selection pulse so that the reset pulse has an

Application/Control Number: 09/866,287

Art Unit: 2675

alternating cycle which is longer that than of the selection pulse (col. 3, lines 42-46, col. 5, lines 58-63, col. 8, lines 8-25, 38-44).

As to independent claim 9, limitations of claim 1, and further comprising, an evolution step of applying an evolution pulse, which is to select a final state of the liquid crystal to an area of the liquid crystal layer (col. 3, lines 55-65, col. 10, lines 7-20) and wherein a pulse applied to the selected one of the scan electrodes during the evolution step has an amplitude which is larger than a maximum amplitude of pulses applied to each of the data electrodes and has a polarity maintaining period which is longer than that of the selection pulse, so that the evolution pulse has an alternating cycle which is longer than that of the selection pulse (col. 10, lines 7-20).

As to independent claim 16, limitations of claims 1 and 9, and further comprising, wherein, Huang et al disclose a liquid crystal display device comprising; a plurality of scan electrodes and a plurality of data electrodes crossed over the scan electrodes (col. 5, lines 53-57); and a liquid crystal layer sandwiched between the scan electrodes and the data electrodes, said liquid crystal layer including liquid crystal (col. 2, lines 55-62); and a driver which is connected to the scan electrodes and to the data electrodes (col. 5, lines 13-16).

As to independent claim 24, see limitations of claims 1, 9 and 16, above.

As to dependent claims 2 and 3, see limitations of claim 9, above.

As to dependent claims 4, 19 and 26, limitations of claims 1, 16 and 24, and further comprising, wherein the polarity inversion cycle of the reset pulse is sufficiently long to prevent the liquid crystal from being polarized (col. 3, lines 42-46, col. 5, lines 58-63, col. 8, lines 8-25, 38-44).

Application/Control Number: 09/866,287

Art Unit: 2675

As to dependent claims 5, 12, 20 and 27, limitations of claims 1, 9, 16 and 24, and further comprising, wherein the time intervals to select the scan electrodes successively are determined based on a time defined by the selection pulse (col.4, lines 28-33).

As to dependent claims 6, 13, 21 and 28, limitations of claims 1, 9, 16 and 24, and further comprising, wherein the maximum amplitude of the pulses applied to each of the data electrodes is lower than a threshold to change the state of the liquid crystal (col. 4, lines 20-28).

As to dependent claims 7, 14, 22 and 29, limitations of claims 1, 9, 16 and 24, and further comprising, wherein the liquid crystal exhibits a cholesteric phase having a selection reflective characteristic (col. 2, lines 55-62).

As to dependent claims 8, 15, 23 and 30, limitations of claims 7, 14, 22 and 29 and further comprising, wherein the liquid crystal exhibits bistability between a planar state and a focal-conic state (col.3, line 55-col. 4, line 33).

As to dependent claim 10, see limitations of claim 1, above.

As to dependent claim 11, limitations of claim 9, and further comprising, wherein the polarity inversion cycle of the evolution pulse is sufficiently long to prevent the liquid crystal from being polarized (col. 10, lines 7-20).

As to dependent claims 17 and 25, limitations of claims 16 and 24, and further comprising, wherein the AC pulses further comprise an evolution pulse, which is to cause the liquid crystal to evolve to a selected final state, to the area of the liquid crystal layer during an evolution step that is subsequent to the selection step (col. 3, lines 55-65, col. 10, lines 7-20).

As to dependent claim 18, see limitations of claim 9, above.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Srilakshmi K. Kumar** whose telephone number is (703) 306 5575.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven Saras, can be reached at (703) 305-9720.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Srilakshmi K. Kumar whose telephone number is 703 306 5575. The examiner can normally be reached on 8:00 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven J. Saras can be reached on 703 305 9720. The fax phone numbers for the
